14th January 2016

Dear Sir,

I have been working with Derek Bolton on two projects for SaTH over the last year. The first is the ongoing procurement and prior enabling works for a new third linear accelerator in Radiotherapy. An existing shielded bunker to house the linac needs major refurbishment before installation can happen. The second is a feasibility study to examine the option of commencing a radioactive thyroid ablation service here, which would require significant modification to an existing ward room structure and facilities.

In both cases Derek has been extremely professional and reliable in his contribution to the project teams. He has always been proactive in looking for effective and affordable solutions to the problems that arise in such projects. I have no hesitation in recommending Derek as an effective team member in any major building development projects. I wish him every success in his future professional career.

Yours sincerely,

Paul A Evans
